

WATER CONSERVATION AND PROTECTION POLICY

At ZIPPER, we recognize that water is not merely a commercial product, but a shared resource and a finite asset that must be protected and used sustainably, both in terms of quality and quantity. Accordingly, we have established a set of objectives to ensure the responsible use and protection of this essential resource:

- We regularly monitor water consumption and report the data using recognized reporting standards, ensuring a high level of accuracy;
- We use water efficiently and responsibly in all facility maintenance and employee-related processes within the Company;
- Through awareness campaigns and visible signage placed throughout the Company's premises, we actively encourage all employees and visitors to use water efficiently and responsibly, both at work and in their personal lives.
