

SUSTAINABLE PACKAGING POLICY

We are committed to minimizing the amount of packaging used in our operational processes. Where packaging is unavoidable, we aim to maximize the use of reusable and recyclable materials, in line with the principles of the circular economy.

The following key objectives have been established by Zipper's top management regarding sustainable packaging:

- We will make every effort to fully optimize available packaging space wherever possible;
- We will strive to maximize the use of reused and/or recycled packaging materials whenever feasible;
- We will use packaging materials that pose minimal risk to human health and the environment;
- We will work to minimize the use of plastic packaging by reducing quantities and introducing alternative materials;
- We will regularly maintain and update our specifications and standards for sustainable packaging.
